

Problem Set 7.5

Instructor: Robert Rand

1 More Combinatorics

Problem 1: How many total ways are there of creating Baskin-Robbins sundaes, using 6 scoops of ice cream (chosen from 31 flavors, order doesn't matter, duplicates allowed)? Simplify your expression as much as possible.

Problem 2: Professor Potechkin has uploaded 7 five-minute bonus lectures on the mathematics of Set. You have two hours worth of time to study them in depth. How many ways are there to divide your time among the videos, assuming you use all the time available, watch them from beginning to end, and watch each video at least once?
